

"I like the way DEKALB® performs – it's profitable."

Craig Forde, a third-generation farmer, has been farming for 30 years and planting DEKALB® for nearly 15. "We really notice a difference between DEKALB and other brands," he says. "Up here, we sometimes have very strong winds, which can take everything down, but the DEKALB is still standing."

When Forde selects his seed, he considers yield potential, drydown and drought tolerance. "I've had a favorite DEKALB hybrid for a while now," Forde says. "It doesn't matter if it's wet or dry, it always works." This season Forde was very pleased with the performance of his DEKALB. "Our yield checks show 224 bushels an acre, which is really good considering the dry conditions," he says.

Craig Forde
Ferryville, Wisconsin

Farmers like Craig Forde are confident in their decision to plant DEKALB for its superior performance, advanced breeding and trait technology, and proven yield advantage.

Three reasons why more farmers are planting more DEKALB.

Individual results may vary, and performance may vary from location to location and from year to year. This result may not be an indicator of results you may obtain as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible.
